

ABSTRACT OF THE DISCLOSURE

5 A recombinant varicella-zoster virus; a process for
producing the same; a pharmacological composition containing
recombinant varicella-zoster virus; a vector containing a
genomic gene of varicella-zoster virus and BAC vector
sequence; cells containing the above vector; a fragment
capable of homologous recombination with a genome of
varicella-zoster virus; and a nucleic acid cassette
10 containing the BAC vector sequence. For these, there is
provided a process for producing recombinant
varicella-zoster virus, comprising use of the BAC vector
sequence.
